LinkedIn did not share its numbers for this report.

Not available from LinkedIn API · Follower history for LinkedIn has not been recorded yet.

Notes for next month

Focus on TikTok next month.

How these numbers are made

Numbers come from each network's API at the time the report was made. Nothing is estimated.

Reach and impressions are the numbers each network reports for the posts published in the period.

Engagement = likes + comments + shares + saves. Engagement rate = engagement ÷ reach, over posts that report reach.

Followers are read once a day; the change compares the first and last reading in the period.

Approval time = from the approval request (or the post being created) to the approval.

On time = published within 10 minutes of the scheduled time, for scheduled posts whose publish time the network reports.

Changes compare against the previous period of the same length, only where both periods have data.
